

Sick of spam?

Alyrica is excited to let you know that we've taken new measures against spam by installing SpamAssassin on our servers. SpamAssassin is a product of Apache Software Foundation, and is considered one of the best spam fighters available.

To get the benefits of spam filtering, you need to enable SpamAssassin via your control panel. Just follow these simple steps:

- Go to www.alyrica.net and click on [Support](#)
- Click on the link to the control panel and log in with your user ID and passcode
- Click on [Administer Email Accounts](#)
- Pick the email account that you wish to set spam filtering for and click edit

Once you do this, you'll get a screen showing our former BMF spam filter and the new SpamAssassin filter. Check the button beside [SpamAssassin](#), and then click [OK](#) to turn on the SpamAssassin spam filter.

For more information on SpamAssassin, go to <http://spamassassin.apache.org>.
